

Yan Brasiliano Silva Penalva - Software Engineer

Tel: +55 71 992432603 Email: yanpenabr@gmail.com LinkedIn: [@yanbrasiliano](https://www.linkedin.com/in/yanbrasiliano) Github: [@yanbrasiliano](https://github.com/yanbrasiliano) Website: www.penalva.me

Software Engineer experienced all system life cycle phases, including production maintenance, new project development, requirements analysis, technical documentation, and version control management.

Education

Postgraduate	UNOPAR 2024-2025	Solutions Architecture
Postgraduate	UNOPAR 2024-2025	Software Architecture
Postgraduate	UNOPAR 2023-2024	Software Engineering
Graduate	UNIFACS 2019-2022	Systems Analysis and Development

Technologies

PHP, Laravel, Symfony, Lumen, Swoole, Octane, Slim, Codelgniter, Javascript Vanilla/ES6, JQuery, TypeScript, Vue, React, Node, Python, Docker, Kubernetes, CI/CD, Vagrant, Ansible, Git, GitLab, GitHub, Jenkins, MongoDB, Postgres, MySQL, SQLServer, Jest, PHPUnit, PestPHP, Shell Script/GNU-Linux, HTML5, CSS3, Bootstrap, Bulma, Tailwind, Sass, DDD, Clean Code, Clean Architecture, Design Patterns, Microservices Architecture, Messaging Services (RabbitMQ), Modular Monoliths, GraphQL, RESTful APIs, Web Servers and Load Balancing (Nginx, Apache, Load Balancers), Development Security Practices, Prometheus and Grafana.

Achievements

Developer of the InovaSenai-BA finalist project: Armored Software.
SENAI World Speaker: GNU/Linux chat - Introduction and OS installation for beginners.

Languages

English: B2 Upper Intermediate.

Professional Experience

Software Engineer(09/2023 - Present)

ACP GROUP - UEFS

- Responsible for developing new features in Laravel, Vue, PostgreSQL, and T-SQL, adopting best practices and Clean Code principles.
- Utilized GNU/Linux expertise to improve server solutions and optimize processes, resulting in a 20% increase in server efficiency.
- Actively participated in meetings, dailies, reviews, and pair programming, contributing to the team's continuous improvement and solving daily challenges.
- Experienced with technologies such as PHP, Laravel, Vue.js, SQL, PostgreSQL, REST API, RabbitMQ, Docker, unit testing, Git/Gitlab/Gitflow, CI/CD, and Kubernetes.
- As a DevOps engineer, responsible for implementing the entire CI/CD pipeline at UEFS, including configuring and integrating tools like SonarQube for code analysis and quality metrics. Manage DevOps automation and implementations covering the entire automation and security process, resulting in an 80% increase in development process efficiency. My role includes implementing CI/CD pipelines, continuous monitoring, and improving security practices and code quality.

Software Engineer(02/2022 - 09/2023)

COMPANHIA DE PROCESSAMENTOS DE DADOS DA BAHIA - PRODEB

- Responsible for developing new features and solutions in Laravel, Vue, and PostgreSQL, focusing on Clean Code principles.
- Utilized GNU/Linux expertise to improve server solutions and optimize processes, resulting in a 50% increase in the team's efficiency in dealing with server-related problems.
- Actively participated in meetings, solved daily challenges, and collaborated through pair programming.
- Also worked as DevOps, being one of those responsible for implementing K8s, Redis, CI/CD tracks, and improvements in development/agile processes.
- Worked with technologies including PHP, Laravel, Vue.js, SQL, PostgreSQL, REST API, RabbitMQ, Docker, unit testing, Git/Gitlab/Gitflow, CI/CD, and Kubernetes.

Junior Software Engineer(11/2021 - 02/2022)

GRUPO RAMIRO CAMPELO - GRC

- Responsible for developing and improving resources for the group's e-commerce platforms: Lojas Guaibim and Casa Mais Fácil.
- Effectively organized and reduced the number of errors in the integration of the purchasing management system with the e-commerce order API, decreasing errors by 25% and focusing on identifying and correcting vulnerabilities.
- Worked with technologies such as PHP, Laravel, JavaScript, T-SQL, Report Builder, Git, and Gitlab.

Intern Software Engineer(08/2020 - 11/2021)**TRIBUNAL REGIONAL DO TRABALHO - 5ª Região**

- Responded to over 50 security incidents and conducted penetration testing, strengthening internal security measures and reducing vulnerabilities by 30%.
- Prepared detailed reports and implemented new security tools, enhancing the organization's security posture and increasing threat detection by 40%.
- First intern in the newly created security incident response sector, contributing to the development and organization of the team.
- Completed a final internship project integrating Openvas with Zabbix using Python, improving asset vulnerability monitoring by 50%.
- Technologies: Python, Shell Script, GNU/Linux, Openvas, Nessus, NMAP, Zabbix, Arachni, Kali Linux.
